

sapium™

Antibacterial Deodorizing & High Water-Absorbing Fiber

Antibacterial Deodorizing & High Water-Absorbing Fiber

sapium is a comfortable, high water-absorbing yarn that improves the structure of fiber through advanced technology, and features high-absorbency, moisture movement and quick-drying characteristics.

1.

Absorbs water quickly

Quickly absorbs water in minute pores, suppressing the formation of waterdrops.

2.

Moves water quickly

Moves and maintains water inside the fibers through numerous capillaries, preventing the swelling of fiber and virtually eliminating any feeling of stickiness.

3.

Dries quickly

Disperses water from the surface of the fiber through its many capillaries, thus maintaining the original quick-drying characteristics of acrylic fiber.

4.

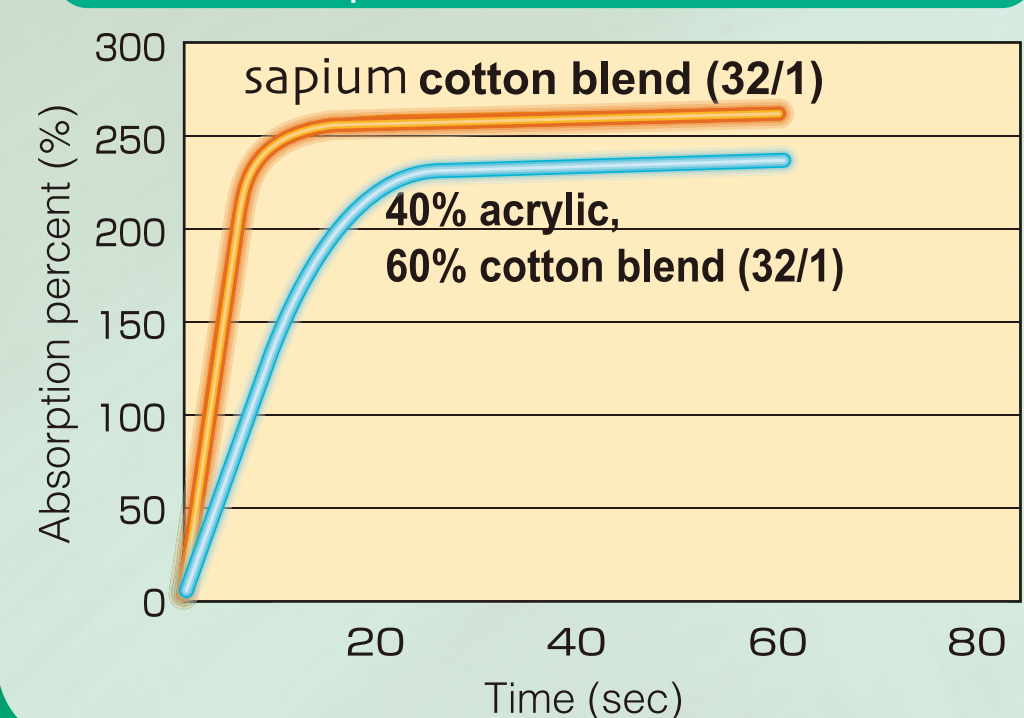

Antibacterial deodorization

Suppresses the proliferation of bacteria on the fiber for an excellent deodorization effect.
